

Ahmed Ikram | Software Engineer

Dundee, Scotland | +44 7421 996048 | ahmedikram30@gmail.com | [LinkedIn](#) | [GitHub](#) | [Online Portfolio](#)

Final-year BSc Computer Science (Data Science & AI), University of Dundee (predicted First, June 2027). Ship full-lifecycle software - design to deploy to real-user evaluation, fixing the issues users surfaced before deployment. Learned Terraform and cloud networking from zero inside an industry project. Work in standard PR and code-review conventions in university teams and stay composed with difficult customers from front-of-house retail. Mentored junior pupils one-to-one as a classroom assistant. Seeking a graduate Software Engineering role from June 2027.

EDUCATION

University of Dundee - BSc (Hons) Computer Science (Data Science and AI)

Sep 2023 - Present

- On track for a First-Class Honours degree. Expected Graduation: June 2027

High School of Dundee

Sep 2018 - June 2023

- Highers: A Mathematics, A Computing Science, A English, B Chemistry
- Computing Science classroom assistant - mentored junior pupils one-to-one during classwork.

TECHNICAL SKILLS

Languages: Python · TypeScript · JavaScript · SQL · T-SQL · Rust / PyO3 · Bash

Backend, APIs, Databases: FastAPI · Flask · asyncio · GraphQL (Strawberry) · Gunicorn · Pydantic · Nginx · SQLAlchemy · Apache Kafka · Model Context Protocol (MCP) · PostgreSQL · SQLite · Redis · Alembic

Frontend: React · React Native · Expo · Tailwind CSS · Vite · Formik · GraphQL Codegen · graphql-ws · Socket.IO

Security: JWT · OAuth 2.0 · RBAC · bcrypt · AWS Secrets Manager

Cloud & DevOps: AWS (ECS Fargate, EC2, S3, RDS, ElastiCache, WAF, IAM, CloudFront, Secrets Manager) · Azure (Databricks, Azure SQL, ADLS) · Terraform · Docker · GitHub Actions · OIDC · Linux · Infrastructure-as-Code (IaC)

Observability & Testing: Grafana · Prometheus · StatsD · Pytest · Vitest · Jest · Playwright · Cypress · k6 · React Testing Library

PROJECTS

DevSync Project Management Platform with GitHub Integration

React · Tailwind · Flask · PostgreSQL · Socket.IO · Gunicorn · GitHub OAuth · AWS · Docker · GitHub Actions CI/CD

- Built an agile/scrum team collaboration platform: Flask REST API over a 12-table indexed PostgreSQL schema, and a JWT-authenticated Socket.IO layer broadcasting live task updates to project rooms with server-enforced membership checks.
- Implemented three-tier RBAC via route decorators, server-side GitHub OAuth with signed CSRF state and Fernet-encrypted token storage at rest.
- Two-way task ↔ GitHub linking: issue/PR read-sync plus comment write-back; dual auth (HTTP-only cookie & bearer) so one JWT serves the browser and API clients.
- Deployed a three-tier console-provisioned AWS VPC (CloudFront S3/SPA → ALB → ECS Fargate → private RDS) with OIDC-federated CI/CD and zero long-lived credentials: multi-stage Docker build cut the runtime image 45% (600MB → 330MB), and CD only promotes after ECS health checks pass.
- Guarded by 1,466 tests (Pytest, Jest, Cypress), with a path-aware k6 load gate: 10 concurrent users through authenticated dashboard reads at CI-measured p95 ~79ms (thresholds p95 < 500ms / p99 < 1000ms & baseline-regression tripwires).

ATM Log Aggregation, Anomaly Detection & Diagnostics (NCR Atleos)

FastAPI · React · PostgreSQL · Kafka · Redis · Docker · Terraform · AWS · CI/CD

- Architected a FastAPI REST API (30 endpoints, 6 routers, JWT + Redis-blacklist auth) with health-check-cascading startup across Kafka, Redis, and PostgreSQL.
- Built the Kafka (KRaft) event pipeline: at-least-once delivery, hybrid Redis/LRU deduplication, Redis Stream DLQ, sustaining ~100 msg/s over 2.5M events.
- Applied 8 Redis patterns (rate-limit, dedup, lock, pub/sub, cache, JWT blacklist, DLQ, counters) off one connection pool; React frontend ships as a ~25MB nginx-alpine image measured at build time.
- Provisioned Terraform across a multi-AZ VPC (ECS Fargate behind an ALB, an EC2 hosted Kafka & Redis in a private subnet); a 3-pipeline CI/CD runs 1,438 tests (959 pytest, 394 Vitest, 10 Playwright E2E, 75 Terraform assertions) and Checkov compliance on every PR, rolling out zero-downtime with zero long-lived credentials.

StockLens FinTech Spending & Investment App

React Native · Expo · FastAPI · PostgreSQL · Redis · Rust · GraphQL · MCP · Terraform · Docker · AWS · CI/CD

- Built an async FastAPI backend: 70+ REST endpoints with JWT auth (bcrypt), biometric unlock, and a stateless MCP server exposing 16 tools over streamable HTTP with OAuth 2.1 PKCE and JWT/JWKS validation.
- Replaced a pandas bottleneck with a native Rust extension (PyO3/Maturin, 12 functions) for technical-indicator computation, cross-built for ARM64 via QEMU in CI and shared by both the LSTM training pipeline and live API.
- Added a GraphQL read façade over the same service layer as REST: Strawberry resolvers with batched preloads eliminate N+1 queries, backed by a shared 60-second Redis quote cache; an authenticated graphql-ws market-data subscription replaces client polling.
- Deployed via Terraform (14 modules, 164 resources): three-tier network isolation (WAF-protected ALB → ECS Fargate ARM64 → private RDS/Redis) for a 20-30% compute-cost cut over x86; multi-stage images are 450MB vs 1.2GB naive.
- 1,570 backend and 844 frontend assertions gate a 9-job CI and an 8-job, 5-stage OIDC-authenticated CD pipeline.

W3C Web Logs ETL Pipeline

Airflow · Databricks · dbt · PySpark · Azure SQL · Terraform · Power BI · Grafana · Prometheus · Marquez · OpenLineage

- Built a Databricks DLT medallion (Bronze → Silver in DLT; gold via dbt) on serverless distributed compute; 153,380 Bronze rows ingested with 0 dropped through 10 DLT quality gates (7 bronze & 3 Silver).
- 16 dbt models compile against PostgreSQL and T-SQL from one codebase via 18 compatibility macros; 121 dbt tests gate every model, catching 213 duplicate rows through a 12-component deduplication key.
- Integrated OpenLineage with a self-hosted Marquez collector across all 4 Airflow DAGs - task-run events, dbt model/column lineage, Azure SQL dataset edges, and custom data-quality facets in one cross-engine lineage graph.
- Deployed 30+ Azure resources through Terraform and OIDC federation; 627 tests, a freshness probe, 3 Grafana dashboards (23 panels), 8 Prometheus rules and 2 Azure Monitor alerts validate pipeline health and data quality.

CERTIFICATES

AWS Academy Graduate - Machine Learning Foundations

Feb 2025

Foundations of Azure AI: Concepts, Capabilities, and Implementation

Oct 2024

AWS Academy Graduate - Cloud Foundations

Mar 2024

EXPERIENCE

Beaully Mini Market, Dundee, Scotland

Retail Assistant

Sep 2023 - Present

Zulus Peri Peri Grill, Dundee, Scotland

Front of House Worker

June 2021 - Sep 2023
